

ISO/TC 272 FORENSIC SCIENCE

Kermit Channell

The U.S. Technical Advisory Group (TAG) to ISO/TC 272 Forensic Science recently accomplished the publication of ISO 18385:16, "Minimizing the risk of human DNA contamination in products used to collect, store and analyze biological material for forensic purposes – Requirements". This poster will update the forensic community on the recent activities and work currently being conducted in forensic science within the new scope of the committee: *"Standardization and guidance in the field of forensic science: this includes the development of standards that pertain to laboratory and field based forensic science techniques and methodology in broad general areas such as the detection and collection of physical evidence, the subsequent analysis and interpretation of evidence, and the reporting of results and findings."*
