

# Validation Certificate Spectrum CE System

Product: CE1008

Developmental validation experiments were performed by Promega Corporation to evaluate the performance of the Spectrum CE System for forensic purposes according to the guidelines outlined by the FBI Quality Assurance Standards (Quality Assurance Standards for Forensic DNA Testing Laboratories, 2020) and the Scientific Working Group on DNA Analysis Methods (Validation Guidelines for DNA Analysis Methods, 2016). The results of these validation experiments confirmed that this system can successfully be used for human identification testing by forensic and paternity laboratories. Each laboratory using the Spectrum CE System should perform its own appropriate internal validation studies to establish interpretation criteria and demonstrate that the Spectrum CE is appropriate and fit for its own human identification uses.

Issued: March 2023
