

Chance, Mere Coincidence, or What Else? Paternity Testing: A Surprising Case

A. Teyssier
Institut Universitaire de Medecine Legale de Geneve

SUMMARY

We analysed a family (mother, child and alleged father) in which the paternal allele of the child was very close to an allele of the excluded putative father in case of six probes out of seven. The exclusion was confirmed by only one probe and three loci out of thirteen we analysed by PCR.
